ABOUT ME

BSc Computer Science graduate from BRAC University (2026) who enjoys building complete, working products. I have built **full-stack web apps** (React, Node.js, FastAPI, MongoDB), an **AI question-answering service**, and deep learning models for medical imaging, and my thesis studied how interface design changes people's choices. Open to roles in **software engineering, web development, AI/ML, data science** and other CS fields where I can build real products and keep learning.

TECHNICAL SKILLS

Programming	: Python, JavaScript, C, C++, Java, SQL
Frontend	: React, HTML, CSS, Tailwind CSS
Backend	: Node.js, Express.js, FastAPI, PHP, REST APIs, WebSockets, Socket.io, JWT Authentication
Database	: MongoDB, MySQL
ML & AI	: Scikit-learn, XGBoost, TensorFlow, Keras, OpenCV, Pandas, NumPy, RAG, LLM APIs
Tools & Cloud	: Git, GitHub, GitHub Actions, Docker, Pytest, Vercel, Render, AWS, Figma, VS Code, Jupyter Notebook
Core CS	: Data Structures, Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
Spoken	: English (Professional), Bengali (Native)

EDUCATION

BRAC University <i>BSc in Computer Science — School of Data and Sciences</i>	Dhaka, Bangladesh 2022 – 2026
Govt. Syed Hatem Ali College, Barishal <i>HSC — Science</i>	Barishal Board 2020 GPA: 5.00 / 5.00
Barishal Zilla School <i>SSC — Science</i>	Barishal Board 2018 GPA: 5.00 / 5.00

PROJECTS

SmartPlate — HCI-Driven Smart Menu System <i>Figma, User Research, Thematic Analysis</i>	BSc Thesis (CSE400) · Jan 2026
- Does a menu's design change what people eat? In a team of four, we tested three menu versions with 50 survey responses and 20 interviews at the BRAC University cafeteria, then built a Figma kiosk prototype. - The information-rich menu raised sustainable choices from 22% to 58% and cut food-waste intention by 32%. Graded A-.	
DocuSense — Document Q&A with AI <i>Python, FastAPI, Docker, GitHub Actions</i>	 GitHub
An API that answers questions from documents with cited sources, and declines when the documents don't support an answer.	
NEON//CORE — Real-Time Chat with an AI Member <i>React, FastAPI, WebSockets, MongoDB</i>	 Live  GitHub
Live group chat where an AI replies to @ai messages, with moderator and admin tools (mute, warn, ban) and an activity log.	
Save Lives — Blood Donation Platform <i>React, Node.js, Express.js, MongoDB, Socket.io</i>	 Live  GitHub
Find nearby blood donors on a map, post requests that alert matching donors within 5 km, and chat in real time.	
ByteSpace — Online Course Website <i>React, Tailwind CSS, Vitest</i>	 Live  GitHub
Built a responsive React site from a Figma design, with reusable components, course filters and tested form validation.	
Brain Tumor Segmentation <i>Python, TensorFlow, Keras, OpenCV</i>	 GitHub
Trained an Attention U-Net to outline brain tumors on MRI scans pixel by pixel, using Dice Loss because tumors are tiny.	
Student Dropout & Health Risk Prediction <i>Python, Scikit-learn, XGBoost, Pandas</i>	 GitHub
Predicted student dropout and patient health risk from real datasets, comparing five machine learning models on each.	
Mini Virtual File System <i>C, Linux</i>	 GitHub
A small file system written from scratch in C, with checksums to detect corrupted data.	
Endless Runner Game <i>Python, PyOpenGL</i>	 GitHub
A 3D running game with power-ups, coins, a day/night cycle and increasing speed, running smoothly at 60 FPS.
